

Society Class 13

22nd August, 2024 at 9:00 AM

POPULATION AND ASSOCIATED ISSUES (9:03 A.M.)

- Statistics
- (a) The debate concerning population growth- Liability or Asset
- Demography
- (a) Concept
- (b) Types
- (c) Demographic Dividend
- Factors Affecting Population Change
- (a) Fertility
- (b) Mortality
- (c) Migration
- Vulnerable sections
- (a) Children
- (b) Persons of Old-age
- (c) Persons with disabilities
- (d) Transgenders
- Population Policy
- (a) Concept
- (b) Types
- (c) Evolution
- (d) Need for a new policy

DEBATE CONCERNING POPULATION GROWTH (9:09 A.M.)

- According to the **UN Population Fund**, India has surpassed China and emerged as the most populous nation in the World.
 - It will continue to hold the top spot till 2100.
 - Liability because
 - (a) There are limited resources.
 - (b) ~~This in addition to~~ **disproportionate demand**, ~~will lead to~~ inequality with respect to the distribution of benefits, opportunities, and resources.
 - (c) ~~This will further~~ create a sense of relative deprivation.
- 

- (d) ~~It will lead to~~ social conflict, creating a law and order situation.
- (e) ~~This will lead to the~~ diversion of resources, which will negatively impact the social infrastructure.
- (f) ~~It will~~ negatively impact the economic growth of the country.
- (g) **Intersectionality Approach:**
- Major disadvantages will be with respect to class/caste/gender/ethnicity/etc.
- However, treating a high population as a liability is the one-sided **accentuation** of reality, as the same population growth can be turned into an **asset** if we transform it into human capital.

we are human resource but when we gain knowledge, skill and health and act as productive assets for society then only we are considered as human capital.

HUMAN CAPITAL (9:17 A.M.)

- Human capital refers to **knowledge, skill, and health** accumulated by an individual in their life, which enable ^{them} ~~us~~ to act as productive assets for society.
- Investments made to build Human Capital
- (a) Investment in education and health.
- (b) Job training
- (c) Skill upgradation
- (d) Migration for the search for better opportunities.
- (e) Information regarding jobs in the labor market.

THE **PROSPECTS** OF HUMAN CAPITAL FORMATION

→ • Individual Level

- (a) Upward social mobility.
- (b) Ability to realize the true potential.
- (c) Higher earnings.
- (d) Productive assets.

→ • Family Level

- (a) Standard of living will increase.
- (b) Intergenerational benefits.

→ • Societal level

- (a) Investing in human capital will lead to better social cohesion.
- (b) It will increase the trust in the institutions. (bz distrust in institutions happens because of feeling of relative deprivation or inequality)
- (c) These together will strengthen the social capital.
- Society needs sufficient human capital to produce further human capital, for example, we need teachers, trainers, and skill providers.

- • **National Level**
 - (a) It creates the innovation potential.
 - (b) Overall economic growth.
 - (c) Potential for enterprises.
 - (d) Potential for sustainable development and poverty reduction.
 - (e) Remittances.
 - (f) The Image of the nation at the global level is enhanced.
 - (g) There is an increase in female labor force participation.
- The government has taken various steps concerning human capital formation.
 - (a) Knowledge
 - National Education Policy, Samagra Shiksha Abhiyaan, **NIPUN** Bharat, Digital Education initiatives (DIKSHA, SWAYAM, etc.), etc.
 - (b) Skill National Skill Development Mission
 - PM Kaushal Vikas Yojana, Grameen Kaushal Yojana, and Atal Innovation Mission.
 - (c) Health
 - For example Ayushman Bharat, ~~Skill India~~, National Health Mission, etc.

DEMOGRAPHY (9:39 A.M.)

- It consists of two words demo and **graphy**. It means the **characteristics** of the population.
- It is defined as the trends and processes associated with the population.
- For example, Birth Rate, Death Rate, Sex Ratio, Migration, Age Structure, Literacy Levels, etc.
- There are two **types of demography**: **Formal demography and social demography.**
- Formal demography deals with various statistics-related information dealing with the various aspects of the population. (aspects like age, gender etc.)
- Social demography deals with the **social analysis** of statistical information on the population.

Q: To what extent investment in human capital is the need of the hour? Discuss.

Q: In the backdrop of the prospects of human capital discuss the challenges in achieving the goal.

DISCUSSION ON QUESTION

- **Q:** There exists a stark North-South divide with respect to demography. Discuss its impact on the policy formulation by the government. (150 words)
- **Approach:**
- Here mention the differences in the policy formulations with respect to differences in the fertility level, education level, and migration.
- For example, In Kerala, the literacy level is close to 100 percent, while in Uttar Pradesh it is 67%.

DEMOGRAPHIC DIVIDEND (9:52 A.M.)

- Demographic Dividend is the economic growth potential generated due to the bulge in the working age group.
- Currently, the population in the working age group (15-59 years) is 62.5%. It is expected to peak around 2036 (65%).
- India is now termed as a 'young country' with an average age of 29 years. (The average age of the population in China is 37 years, and in Japan is 48 years.)

DISCUSSION ON QUESTION

- Examine how the bulge in the working age group creates a potential for economic growth. (150 words)
- **Points** (think w.r.t economic growth not w.r.t labor)
- (a) Increased availability of labor force.
- (b) Fluid intelligence of the young population. which creates potential for innovation and creativity.
- (c) Youth has high risk-taking ability.
- (d) It will create a pool of cheap labor.
- The availability of the labor force will enable the nation to achieve its global aspirations.
- (e) **Independent population** is more as compared to the **dependent population**, which creates scope for more savings and investments.
↓
- (f) With more purchasing power potential, domestic consumption will increase.
↓
- (g) Due to less government spending on the dependent population, the fiscal space for investment in the social infrastructure would be created. which will create more human capital.
- (h) It can contribute to economic growth through remittances.
- (i) The working class is aspirational and hence will create pressure on the government for better opportunities, which in turn will create grounds for industrialization, urbanization, start-up culture, etc.
↓
- (j) It will reduce the social conflicts in the society.

- However, this window of opportunity is for a limited period as the population will peak in 2041.
- Secondly, demographic dividend only offers a potential, it doesn't guarantee economic growth.
- Economic growth depends on two factors: the quality of the workforce and job opportunities.

FACTORS DETERMINING OR AFFECTING THE POPULATION CHANGE (10:20 A.M.)

- (a) Fertility
- It means the actual childbearing by women in their reproductive age group (15-45 years).
- (b) Fertility Rate
- Fertility rate means the number of live children born per 1000 women in the age group 15-49 years.
- The total fertility rate (TFR) is 2 (According to NFHS 5).
- This is below the replacement level (TFR=2.1).
- The exceptions to lower total fertility rates are UP (2.7), Bihar, Jharkhand, Meghalaya, and Manipur.
- In light of this data, UP has released its population policy where the target is to reduce the population or the fertility rate to 2.1 by 2026, and 1.7 by 2030.

FACTORS RESPONSIBLE FOR HIGH POPULATION GROWTH (10:27 P.M.)

- (a) Poverty.
 - Still, people believe that more children means more working hands.
 - (b) Lack of education and awareness with respect to reproductive rights, benefits of small families, family planning methods, etc.
 - (c) Son-meta preference, early marriage, low status of women, religious beliefs that prohibit the termination of pregnancy, etc.
 - (d) Increase in life expectancy due to improved health infrastructure and its accessibility.
 - (e) High Infant Mortality Rate, Child Mortality Rate, etc. also create a greater desire for more children.
 - (f) Joint family norms.
 - (g) Universalization of the institution of marriage with the prime purpose of reproduction.
- (arrange your points from more important to less important points)

Q: "India's demographic dividend if not nurtured properly can turn into demographic disaster". In light of this statement discuss why it is important for India to focus on this opportunity?

Q: "Demographic dividend in India will remain only theoretical unless our men power becomes more educated, aware, skilled and creative". What measures have been taken by the government to enhance the capacity of our population to be more productive and employable?

Q: Critically examine whether growing population is the cause of poverty or poverty is the main cause of population growth in India ?

Hint: Growing population is one factor among the causes of poverty and now explain what govt. is doing to control this and also tell when it is turned into human capital then poverty can be eradicated.

Explain poverty is also a main cause for population increment because of education and wrong ideology.

MIGRATION (10:37 P.M.)

- (a) Concept
- Statistics
- Who are migrants?
- Types of Migration
- (b) Causes: Push and Pull factors.
- (c) Consequences: For source region, destination region, and migrants.
- (d) Way Forward

DISCUSSION ON QUESTION (10:42 A.M.)

- Q: Critically examine the factors responsible for the decline in fertility rate and enumerate its consequences. (150 words)
- Points
- The total fertility rate is 2.
- Causes
- (a) The government's effort in the direction of family planning. For example, the National Population Policy, access to contraceptives, Mission Parivar Vikas, **Vasectomy fortnight**, etc.
- (b) Improved nutrition, healthcare, living conditions, and education.
- (c) Expanded choices for women along with the increased Female Labor Force Participation.
- (d) The change in societal values like delay in marriage age, preference for small families, better status for women, etc.
- (e) Urban lifestyle, higher cost of living, the emergence of the nuclear families, etc.

Negative Consequences (We all know about +ve consequences so here we will only write -ve consequences)

- (a) The aging population would reduce both savings and investments implying **higher taxes** or lower spending on the old age population.
- (b) The increased burden of the aging population will create more demand for the care economy (purple economy). (old age economy is silver economy and care economy is purple economy)
- However, due to the limited government spending, it is not much developed.
- (c) Older people have more crystallized intelligence as against fluid intelligence, which may reduce the potential for innovation and creativity.
- (d) Entrepreneurship vacuum as the older countries and their youth are less comfortable in taking risks.
- (e) Shift in the family dynamics.

- (Decreasing family size can disrupt the traditional support system, which in turn can lead to psychological issues (isolation, stress, increased incidences of suicides, etc.).
- (f) Decline in the demography may also lead to skewed migration patterns which may attract immigrants to address the workforce shortages. However, it may end up creating socio-cultural conflicts.

MIGRATION: CONCEPT (10:58 A.M.)

- It is a process where the population is moving from one geographical unit to another with the change in residence for a considerable amount of time.
- A migrant is a person whose current place of residence is different from his place of birth or the last place of residence.

Types of Migration

- Based on Duration: Permanent, Semi-Permanent, Temporary.
- Based on Destination:
 - (a) Internal: Rural to rural (62%), rural to urban (20%), Urban to urban (13%), and Urban to rural (5%).
 - (b) International
- According to the Economic Survey 2017 inter-state migrants are around 60 million, and inter-district migrants are around 80 million.

ECONOMIC CAUSES FOR MIGRATION (11:08 P.M.)

- Source
 - Push factor: Agriculture distress, lack of employment opportunities, etc.
 - Pull Back factor: Government schemes and counter magnets.
- Destination
 - Pull Factor: Industrialization, Globalization, etc.
 - Push Back Factor: Congestion, high cost of living, etc.

SOCIO-CULTURAL CAUSES FOR MIGRATION

- Source
 - Push factor: Differential access to resources.
 - Pull Back factor: Feeling of nativism and family reunification
- Destination
 - Pull Factor: Urbanism and marriage.
 - Push Back Factor: Lack of cultural integration and ghettoization.

POLITICAL CAUSES FOR MIGRATION

- **Source**
- **Push factor: Violence and corruption.**
- **Pull Back factor: Strengthening of local governance.**
- **Destination**
- **Pull Factor: Political freedom and safety and security.**
- **Push Back Factor: Son of soil policy.**

CONSEQUENCES (11:13 A.M.)

-
- **Source Region**
 - **(a) Economic**
 - **Loss of Human resources**
 - **Provide opportunities to the source area to employ greater focus in improving the economic conditions of the reduced population.**
 - **Benefits of Remittances.**
 - **Low industrialization.**
 - **(b) Demographic**
 - **The dependent population will increase.**
 - **The feminization of work.**
 - **The decline in the birth rate.**
 - **High probability of child labor.**
 - **(c) Socio-cultural**
 - **Acts as an agent of social change, as new ideas get diffused to the source area.**
 - **The absence of adult males may cause the dislocation of families, a dual burden, and violence against women.**
 - **(d) Political**
 - **It may lead to the emergence of ghost hamlets which overall decline the political representation.**

→ Destination Region

- (a) Economic
 - Availability of cheap labor.
 - Overburdening of resources.
 - The increased cost of living.
 - Increase in the rental economy.
 - It will promote the labor-intensive industries.
 - Informalization of the labor market.
 - Boost to the economy.
 - Productivity will increase.
- (b) Demographic
 - Skewed sex ratio.
 - Change in the ethnic composition of the profile.
 - It negatively can impact both literacy and the health profile of the demography.
 - Violence against the marginalized may impact their **morbidity** and mortality.
- (c) Socio-cultural
 - Promotion of multiculturalism but at the same time cultural chauvinism.
 - Increased ghettoization based on **primordial identities**.
 - Slum proliferation.
 - The problem of cultural lag.
 - Rise of the middle class.
 - Rise in regionalism.
 - A rise in demand for limited resources might increase the incidences of crime.
- (d) Political
 - Son of soil policy.
 - The challenges faced by the state administration because of excessive population.
 - The change in political dynamics of the region.
 - the constitution of various pressure groups that may impact the policies of the government.

THE TOPIC FOR THE NEXT CLASS: MIGRATION (CONTINUED)
