Q: "Caste must be counted because it counts". Discuss the statement in light of the recent debates over castebased census.

Approach:

- Define Caste and caste-based census.
- Give reasons why it must be counted.
- Also provide the reason why it should not be counted.
- Provide a balanced conclusion.

Caste refers to a unique <u>system of social stratification</u>, peculiar to Indian society, which is <u>characterized by</u> <u>particularistic-ascribed pattern of behavior</u>. **Caste-based census** refers to a <u>population enumeration</u> that collects <u>socioeconomic</u> data on the various caste groups within a society.

Significance of Counting the Caste:

- **Reliable Data:** The representation in political and administrative institutions of various communities can be ensured with availability of reliable data.
- **Determinant of Economic Development:** Caste determines the <u>economic prospects of a person</u>, especially in rural areas. According to **Satish Deshpande**, it is arguably <u>most important regulator of life-chances</u> today.
- **Understanding Inequalities: M. Vijayanunni** portrayed it as a <u>move to challenge the status quo</u> by <u>highlighting inequality and eventually eliminating caste</u>.
- **Political Representation:** According to **Christophe Jaffrelot**, a caste census would assist in <u>mapping political</u> representation and allowing for the <u>better inclusion of underrepresented groups</u>.
- **Better Targeting:** The supporters argue that it will be <u>useful in better intersectional planning and targeting</u> of social schemes.

While there are various potential benefits of the Caste-based census, there are also certain apprehensions regarding the use of the exercise.

Issues with Caste-based Census:

- Hardening of the Caste identities: As argued by M N Srinivas, A fresh enumeration on caste would lead to <u>fresh</u> mobilization and a further hardening of caste identities.
- **Complexity of Caste System: A.M. Shah** points out the <u>difficulty in collection of data given the multiplicity of names</u> and the contextual manner in which the terms are used.
- **Demographic Changes: Ghanshyam Shah** talks about the <u>difficulty being exacerbated due to migration, inter-caste marriage</u>, modern employment practices etc.
- Available Alternatives: Y. Singh points out on already available data from various committees and commissions.
- **Privacy concerns:** Data and privacy concerns have <u>persisted due to which there had been partial release of SECC data</u>.
- Suhas Palshikar argues that, "It is true that Bihar's caste census opens up door for more informed public policy on social justice. However, mere conducting a caste census is no guarantee of such a policy shift- particularly in view of the populist pressures parties have themselves built and under which they operate".

As **Nandini Sundar** (Caste as Census Category: Implications for Sociology) puts, a caste census by itself may put little to our understanding but may complement the sociological understanding along with historic and ethnographic contextualization.
